

BUSINESS ENGLISH 2

WELCOME!

Welcome to the assignment *Business English II.* This course will help you understand the vocabulary and context required to implement good communication in your workplace. As a Software Engineer, you will require context associated with customer experience and communication means; processes and procedures; entrepreneurship and innovation, as well as grammar and punctuation.

This course will enforce your knowledge on how to convey ideas and arguments in customer relationship. Hopefully, after this course, you will be able to transform you company in a new one.

RECOMMENDED BOOKS

- Wallwork, A. (2018). *Wordsearchers: Widen Your Vocabulary in English*. Springer.

UNIT 1
CUSTOMER RELATIONSHIP MANAGEMENT

SYLLABUS UNIT 1

1.1
Experience and Loyalty

1.2
Communication Means

INTRODUCTION

The objective of the course *Business English II* is to prepare the student for the real world challenges. Therefore, this course complements the topics studied during the course *Business English I*. In particular, this course will help you to improve your vocabulary, either to work in a big company or to lead yours as entrepreneur.

This first unit focuses in scenarios where you must provide a good service to the customers. Specially, by providing a great experience.

PROFESSIONAL COMPETENCIES

- The student will be able to explain the relevance of customer loyalty.
- The student will be able to compare communication means.

EXPERIENCE AND LOYALTY

The area of Customer Relationships Management (CRM) is responsible for organizing deals and designing the user experience. Although, there are five status of the experience, there are **two main strands**:

Excellent / Good / Strong customer relations. The company promote long-term relationships.

Build / Improve customer relations. The company does not consider important to maintain long-term relationships.

To understand how to improve the customer relationships there are **three fundamental concepts**:

- **Customer care.** It means how well customers are taken care of while they interact with the brand. In many instances, customer care moves one step beyond the basic customer service by building an emotional connection.

EXPERIENCE AND LOYALTY

- **Customer service.** It is the advice or assistance a company gives to its customers. The goal of customer service is to increase customer satisfaction, and it usually comes by answering questions after a purchase has been made.

- **Customer experience.** It is the complete journey of a customer's interactions with a brand. Encompasses all contact with the customer: from discovering a product, purchasing it, using it, and following up with the brand afterwards.

These three concepts all sound similar because they all contribute to a company delivering on its promises and building loyal, satisfied customers. In particular, in the software industry, it is important to think in **three main elements that will improve the customer relationship**:

- Convenient and efficient payment systems.
- Customer-friendly navigation.
- Up-to-date technology.

Problems will always exist. Therefore, it is important to be responsible. The customer needs to know that you do not deny the problem and are acting to resolve it. The following **vocabulary** will help you:

Mix-up. These are accidents or mistakes. For example, when an item is shipped to the wrong address you may say:

> "There was a mix-up."

- **Oversight.** It refers to the fact that you didn't do something because you forgot about it. For instance, if you forget to deploy the right version you may say:

> "I oversighted to deploy the last version."

- **Replacement.** It is when you substitute a product by another one. For instance, if the company sent the wrong product you may say:

> "Would you like a replacement or refund?"

- **Inconvenience.** It expresses that the experience was not as fluent as it was supposed. Therefore, you may say:

> I realize this has been an inconvenience, I apologize for that.

- **Frustrating.** It helps to empathize with the customer. For instance, to indicate that you understand the anger you may say:

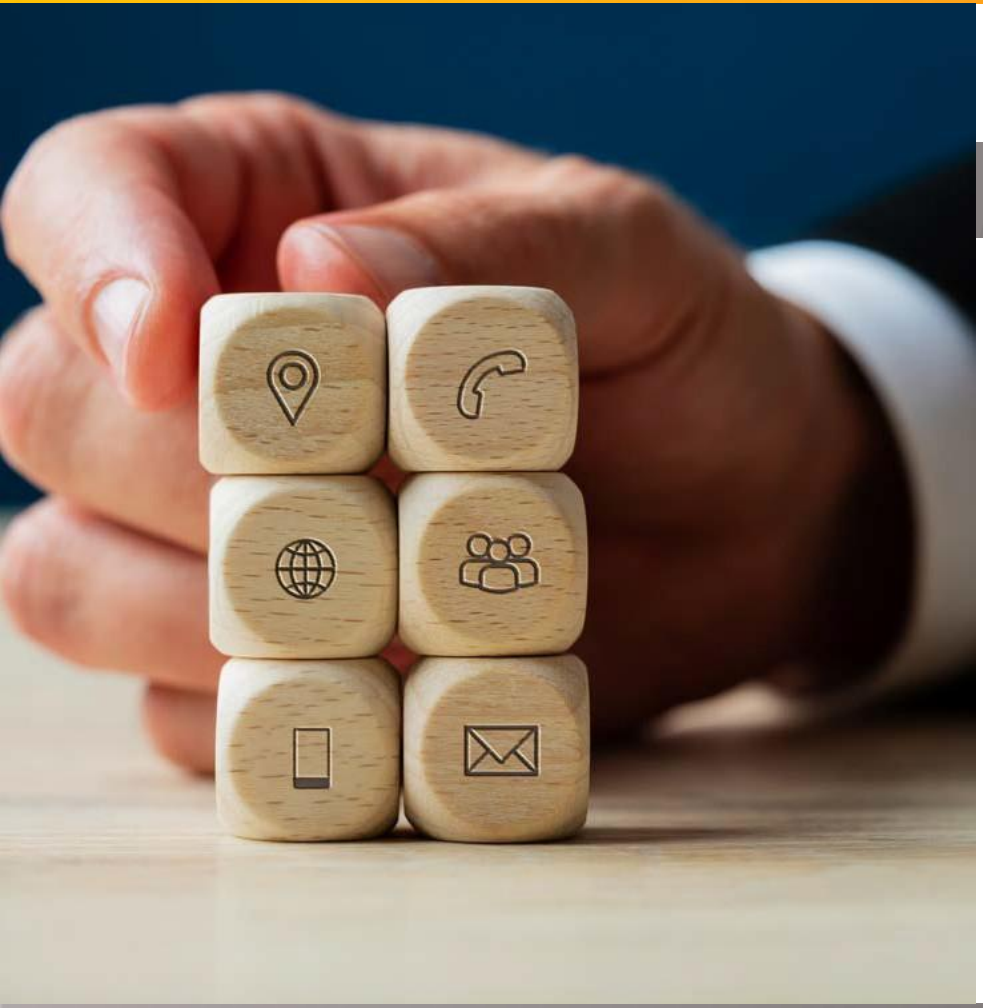

> I know this is frustrating. Let me see what I can do.

Experience & loyalty

COMMUNICATION MEANS

As a Software Engineer you need to suggest how the information systems in the company may enhance the customer service. For example, you need to define whether the customer service will be over-the-phone, by chat or face-to-face. You also need to define whether the assistance will be associated with the product or a technical issue. Finally, you must clarify who should provide the guidance: a person or an automated robot.

Each mean has some advantages and disadvantages. For example, these are pros and cons of **face-to-face communication**:

- It's a direct form of communication. It is faster to present a problem verbally than to describe it by writing.
- Complex problems are better explained and elaborated during a live verbal interaction. Also, the solution may be immediate.
- The customer may need to visit the establishment rather than use technology from home.

The following ones are the pros and cons of an **over-the-phone communication**:

Pros	Cons
❑ Allows to understand customers emotions better.	❑ Young people tend to text more often as opposed to making phone calls.
❑ Older generations are generally more familiar with telephone devices than with computers, so they may feel more comfortable to make a phone call over a written inquiry.	❑ Due to service staff unavailability customers are being put on hold.

Pros and cons of **email communication**:

Pros	Cons
❑ Allows customers to send a query whenever it is convenient to them, even beyond working hours.	❑ It is an indirect form of communication which makes the assessment of customers´ emotions tricky.
❑ Repetitive queries can be automated with predefined responses.	❑ It is slower to present (and read) a problem in a written form.

Pros and cons of **live chat communication**:

Pros	Cons
❑ The support agent can hold multiple live chat conversations which leads to faster response times.	❑ It is a fast mean of communication but phone or face to face communication is faster.

The following ones are the pros and cons of an **social media communication**:

Pros	Cons
❑ Allows users to get in touch conveniently without the necessity of switching channels to email or website.	❑ Negative feedback can be easily shared to other users and harm your reputation – be honest and diplomatic to avoid escalations!
❑ Customers have the opportunity to read and provide answers to each other questions at the same time decreasing the workload of your customer agents.	

The following ones are the pros and cons of the **frequently asked questions (FAQ)**:

Pros	Cons
❑ Stays on the website 24/7 so it can be accessed anytime.	❑ Lacks an individual approach – only the common and foreseeable questions are included.
❑ Reduces repetitive phone calls and emails.	❑ Needs to be skillfully written to answer the question straight to the point.
❑ Cost of set-up and maintenance is lower in comparison to phone or email service.	

COMMUNICATION MEANS

In general terms, the **advantages of a modern mean of communication** include:

Transmission speed.

Expansion of coverage areas.

Low cost.

On the contrary, the main **disadvantage** is:

Security

Independently of the mean, remember the following **phrases when you talk to customers:**

- I do not know, but let me find out.
- I certainly can check that for you.
- I will update you by (time).
- As much as I would like to help.
- Thank you for bringing this to our attention.
- I apologize for the inconvenience.
- I am happy to help.

Participate in the forum by sending pictures. The pictures must provide evidence that you have access to the free version of:

- Grammarly

Press the following button to participate in the forum:

CLOSING REMARKS

This unit describes the main concepts associated with a great customer satisfaction. In particular, explains the pros and cons of different means of communication. With this knowledge you will be able to identify the main benefits of each mean and, consequently, recommend better information systems designs.

CONGRATULATIONS!

You have just finished the first unit of your course *Business English II.* We invite you to conclude this effort by taking the exam of this unit. To do that, you must go back to the main screen and click on "*Presentar examen*".

UNIT 2
TALKING ABOUT YOUR COMPANY

SYLLABUS UNIT 2

2.1
Describing Main Characteristics

2.2
Policies, Processes and Procedures

INTRODUCTION

The goal of this second unit is that you know how to convey your ideas. Specially, those associated with descriptions and sequences. Besides, you will learn how to organize your ideas and know how to describe complex environments in few steps.

PROFESSIONAL COMPETENCIES

- The student will be able to describe a company professionally.
- The student will be able to compare policies, processes and procedures.

DESCRIBING THE MAIN CHARACTERISTICS

You may need **to present your company to visitors**, potential investors or partners, or new suppliers and clients. To do that, you must talk clearly, concisely and positively about what your company does. You may consider the **following points**:

- The history.
- The performance.
- The structure.
- The responsibilities.

DESCRIBING THE MAIN CHARACTERISTICS

To talk about the **history of a company** you may use the following phrases:

"We were **founded** / **set up** / **established** in 1981."

"We **merged** with X company in 1990."

"The subsidiary was **sold off** two years after and the remaining company was **split** into five different divisions."

"We **floated** on the stock exchange last year."

DESCRIBING THE MAIN CHARACTERISTICS

You need to talk in **past tense** when you talk about the history of a company. As you may notice in the previous slide, some verbs add 'ed' to the end to indicate that they are in past tense. Other verbs change completely. There are no specific rules to follow. You need to learn one by one its past tense form.

DESCRIBING THE MAIN CHARACTERISTICS

To talk about the **performance of a company** you may use the following phrases:

- We are the **market leaders** in three countries.
- We have **expanded** our operations.
- We make **annual profits** of $1 million.
- Our **turnover** is **in excess** of $2 million.

DESCRIBING THE MAIN CHARACTERISTICS

To talk about the **structure of a company** you may use the following phrases:

- At the head is the **President**, or **CEO**.
- We **employ** more than 2,000 people **worldwide**.
- Below the President is the **Managing Director**, who has **overall responsibility** for **the day-to-day** running of the company.

To talk about the **responsibilities of a company** you may use the following phrases:

"I **report to** the Marketing Manager"

"We work closely with the sales team, who are **in charge of** customer accounts."

"I **deal with** customer enquiries."

"We **co-operate** with our office worldwide."

VIDEO 2

Please review the following video:

Talking about your company

POLICIES, PROCESSES AND PROCEDURES

Although the words processes, policies and procedures look similar, there are some **differences**:

Policies. These are a set of ideas, or a plan of what to do in particular situations, that has been agreed officially by a group of people, a business organization, a government, or a political party. A business example is:

Most workers should retire at 60.

When creating a policy for your workplace, you should start by reviewing the mission statement, vision and values. Also, **a workplace policy should**:

- Set out the aim of the policy.
- Explain why the policy was developed.
- List who the policy applies to.
- Set out what is acceptable or unacceptable behaviour.

- Set out the consequences of not complying with the policy.
- Provide a date when the policy was developed or updated.

Policies do not just communicate ideas to help the company succeed, but also **provide insurance the company against problems** by identifying risk and demonstrating an attempt to tackle it.

POLICIES, PROCESSES AND PROCEDURES

There are **four key policies every business should have**:

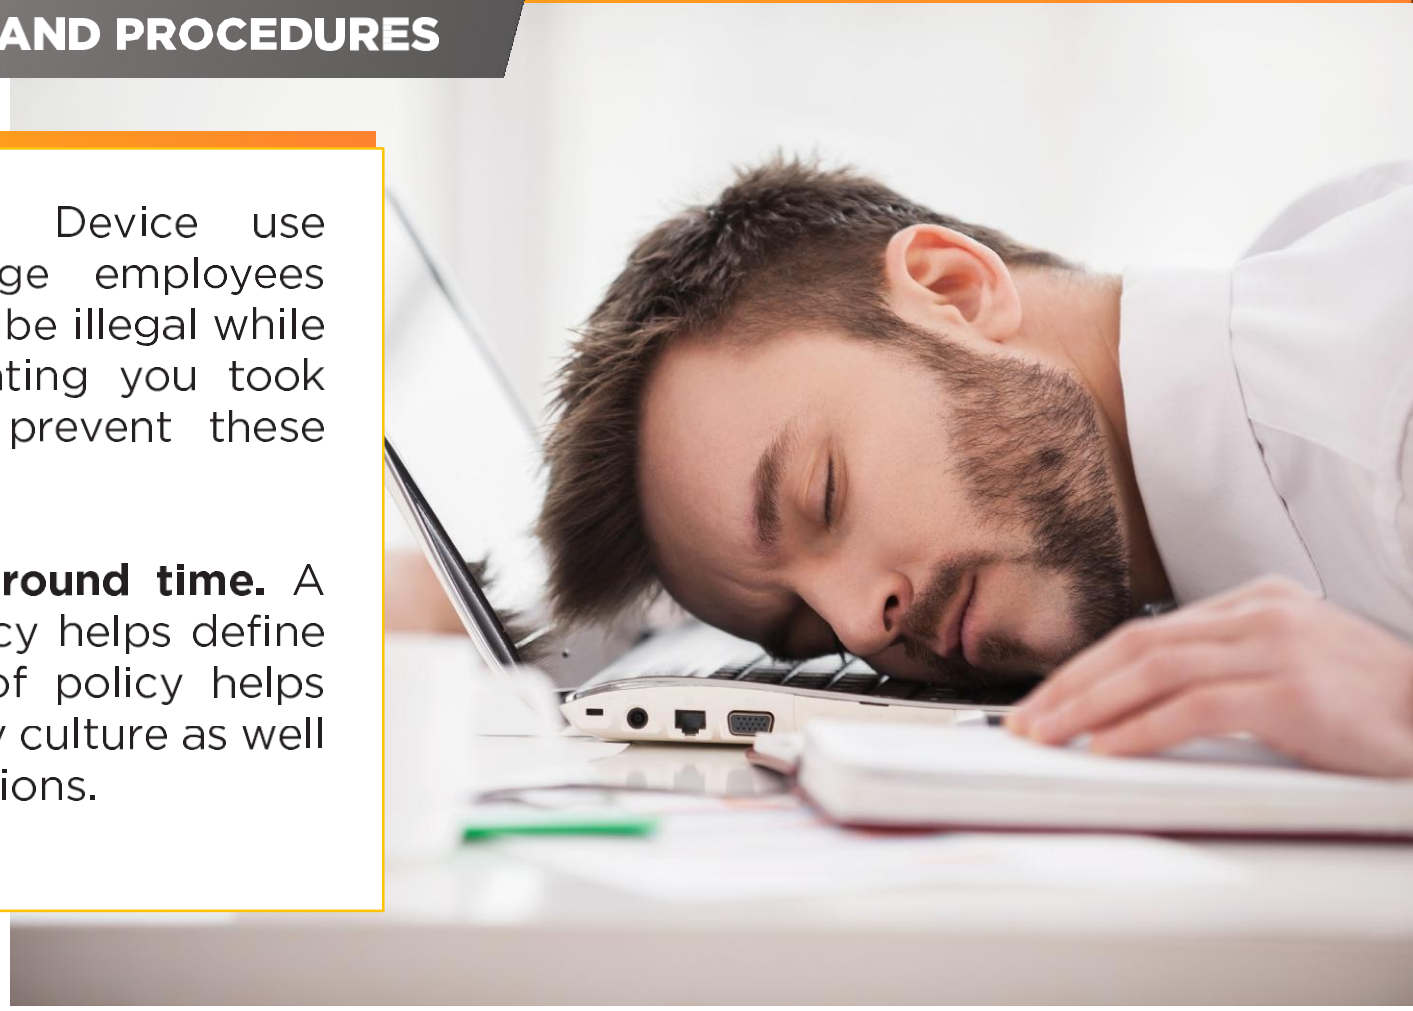

Workplace safety policies. Having effect workplace safety policies provide guidance to employees which act as preventive measures.

Disciplinary policies. This helps you keep hold of your staff and not let a culture of poor behaviour set in and can provide cautions and guidance which could tackle problems before they become too great.

POLICIES, PROCESSES AND PROCEDURES

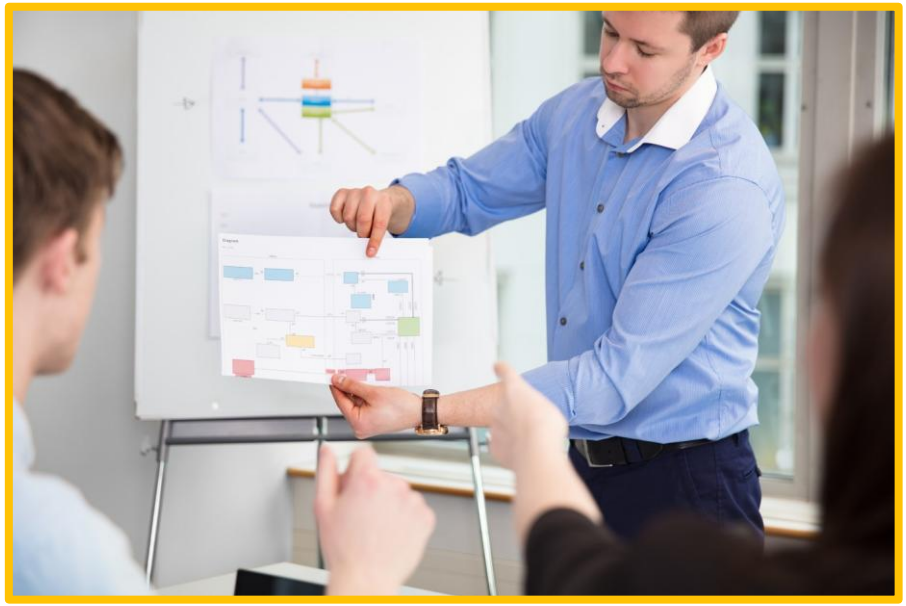

Device use policies. Device use policies will discourage employees from activities that can be illegal while also legally demonstrating you took reasonable action to prevent these abuses.

Work hours and turnaround time. A strong work hours policy helps define availability. This kind of policy helps foster a better company culture as well as enhanced client relations.

- **Process.** They are a series of actions that you take in order to achieve a result. Some business **examples** are:

  - Consultation
  - Decision-making
  - Planning
  - Approval
  - Evaluation
  - Inspection

In simple words, processes are the maps which guide actions and unlike policies, **processes describe patterns of work** and tend to detail the necessary steps to complete a task.

The use of processes is to tackle inefficiencies and improve management practices.

For example, if identifying that your company is receiving a number of negative reviews, then you have found a potential problem.

However, identifying the root of that problem requires understanding the journey a product or service takes to the end user. Having a clear and established set of processes allows for this journey to be documented and therefore analysed to locate and fix problems.

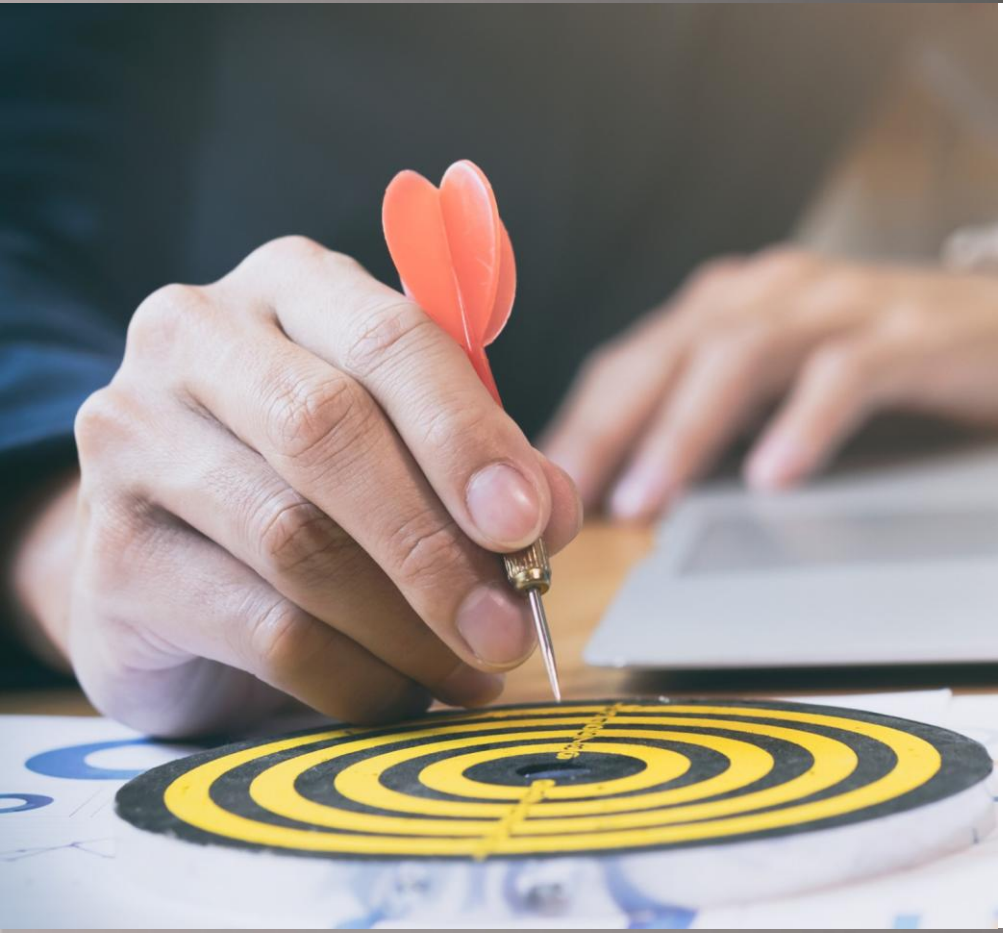

Procedures specify tasks and define actions.

Process management seeks to achieve **three main goals**:

- **To clarify strategic direction.** It's important for all parties to know what they're doing and why. Moreover, you company's daily operations should be leading toward the business' overall strategic goals. Clarity in direction is crucial to achieving the goals your business should be achieving.

- **To make sure the company´s resources are aligned efficiently.** This may sound obvious, but inefficiency in business is a major problem. According to the Powering Productivity Research, conducted across the US, UK, Netherlands, and Germany, the primary cause of inefficiencies are poor processes.

- **To improve the discipline in day to day operations.** For employees to be effective, they need to know what is expected of them and how they can achieve this. This also helps raise individual efficiency as well as the operational efficiency.

- **Procedures.** They are a set of actions that is the official or accepted way of doing something. A business example is:

  - You must follow correctly the new procedures for dealing with complains.

In resume, a policy is a guideline, a process is a flow of activities and a procedure is a detailed instructions of steps.

POLICIES, PROCESSES AND PROCEDURES

Organizations need both policies and procedures for a wide range of topics. The following are some **policies and procedures illustrations**:

- For attendance
- For employee conduct
- For use of company property
- For harassment and discrimination
- For Internet and social media use
- For health and safety
- For expenses

ACTIVITY 1

We invite you to do the following activity:

Press the button to download the activity:

Press the button to submit the activity:

CLOSING REMARKS

This unit provides vocabulary that you may use to describe your company, others, or sequences. In particular, this is relevant because you will need in an interview to describe the company that you are actually working for, or the company that you want to work for. When you meet the customer you probably will need to describe the environment of your current company. Furthermore, to argue why do you think a company is good or bad your will need to describe policies, processes and procedures.

CONGRATULATIONS!

You have just finished the second unit of your course *Business English II*. We invite you to conclude this effort by taking the exam of the unit. To do that, you must go back to the main screen and click on "*Presentar examen*".

UNIT 3
ENTREPRENEURSHIP AND INNOVATION

SYLLABUS UNIT 3

3.1 Entrepreneurship

3.2 Innovation

INTRODUCTION

The goal of this third unit is to illustrate the vocabulary associated with small and medium enterprises as well as new companies. For example, in your case, technology-based entrepreneurships. For this type of companies, innovation is a must. Therefore, the vocabulary to exchange ideas and disruption is also discussed.

PROFESSIONAL COMPETENCIES

- The student will be able to promote a technology-based business initiative.
- The student will be able to compare innovation types and argument which is the best.

ENTREPRENEURSHIP

There are several **reasons for starting a business.** Here are some examples:

- To give yourself more social status.
- To create employment for yourself.
- To achieve your ambition.
- To be your own boss.
- To become wealthier.
- To exploit a gap in the market.
- To do something more interesting.

To start a business is not simple. In general terms, before launching a company you must do a business start-up course. This course will help you to write a realistic business plan. Then, you must conduct at least one market research. Furthermore, you probably will need investors or work in a part-time job. Finally, you need to work hard and maintain a safety equilibrium among optimism and realism.

Being more specific, you need to do at least the following **actions**:

- Research the market before you do anything and make a sales forecast; this way, you will know how much turnover to expect.
- Make an estimate of your cost. For example what the rent will be on your premises, how much interest you will have to pay on your own, your salary bill, etc.

- By subtracting your cost from turnover you should be able to make a profit forecast. The people who lend you money or invest in your business will want security on the money they are lending you.

- If you are going to ask for credit from a bank, check the interest rate –can you afford to pay back so much? Also, your bank will want some security on the money they lend you, so do you have a house or other asset which you can use as a guarantee?

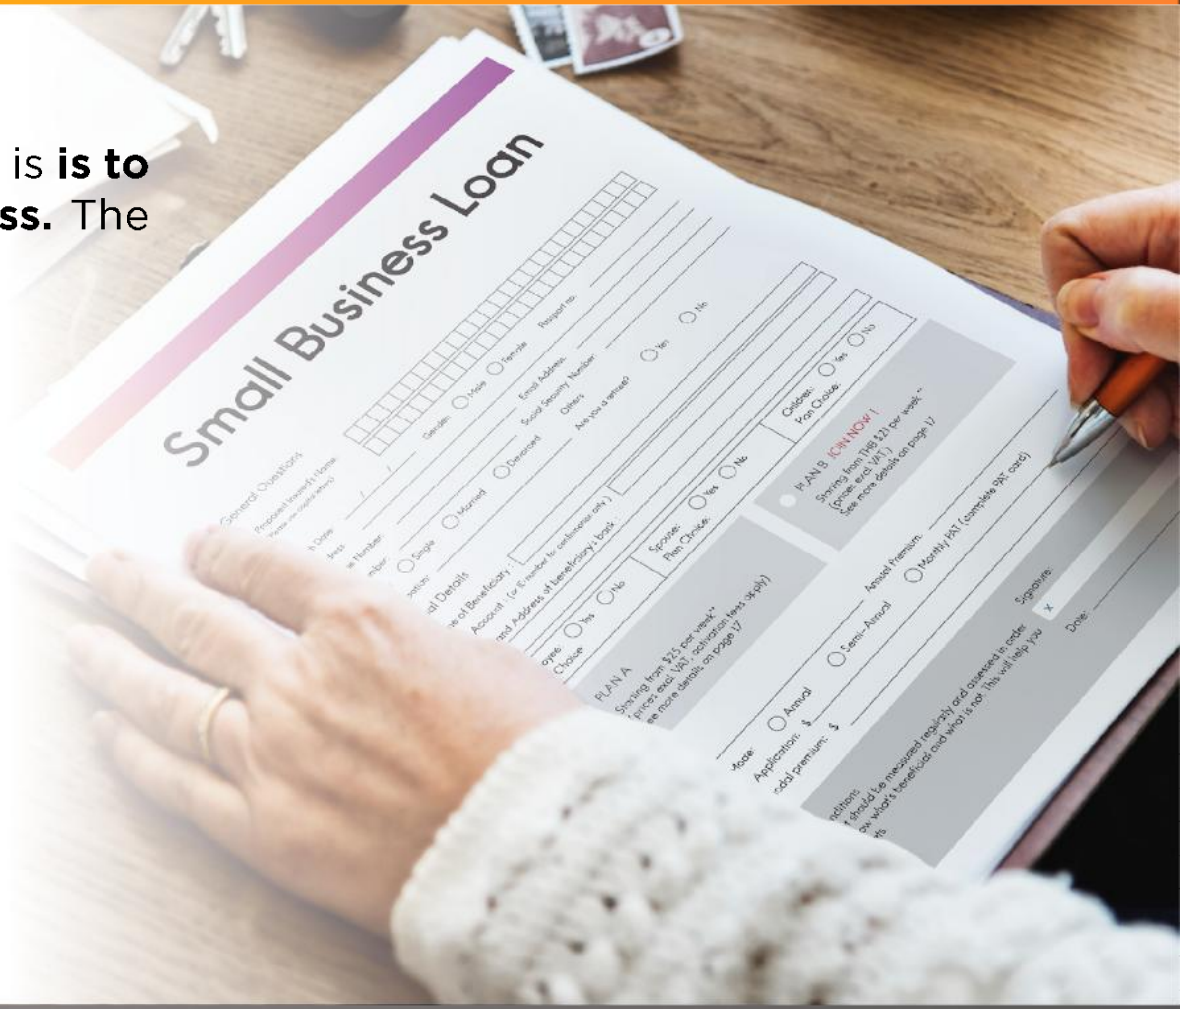

- Of course, the Government will require you to pay taxes on your profits.
- Your main liability will probably be your loan from the bank.

You will have to think about all of this, and more, situations. At least, while you stay as a start-up.

A **start-up** is a company that's in the initial stages of business. Until the business gets off the ground, a start-up is often financed by its founders and may attempt to attract outside investment.

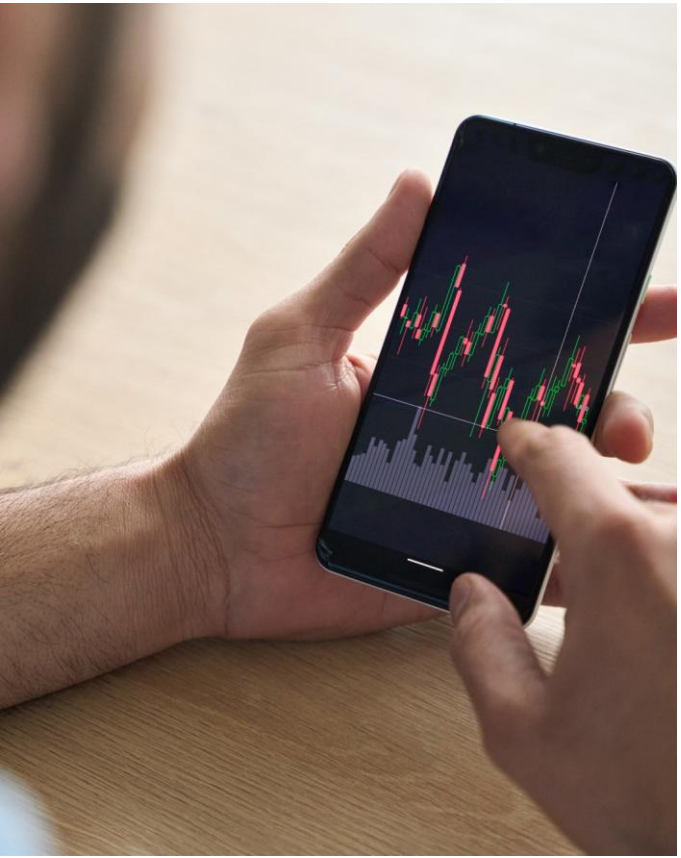

Probably, the most complicated part is **is to get the money to fund your business.** The following are some options:

- A bank loan.
- A mortgage .
- A government grant.
- Venture capital.
- Private equity.
- Personal savings.
- Going into partnership.
- A loan from family or friends.

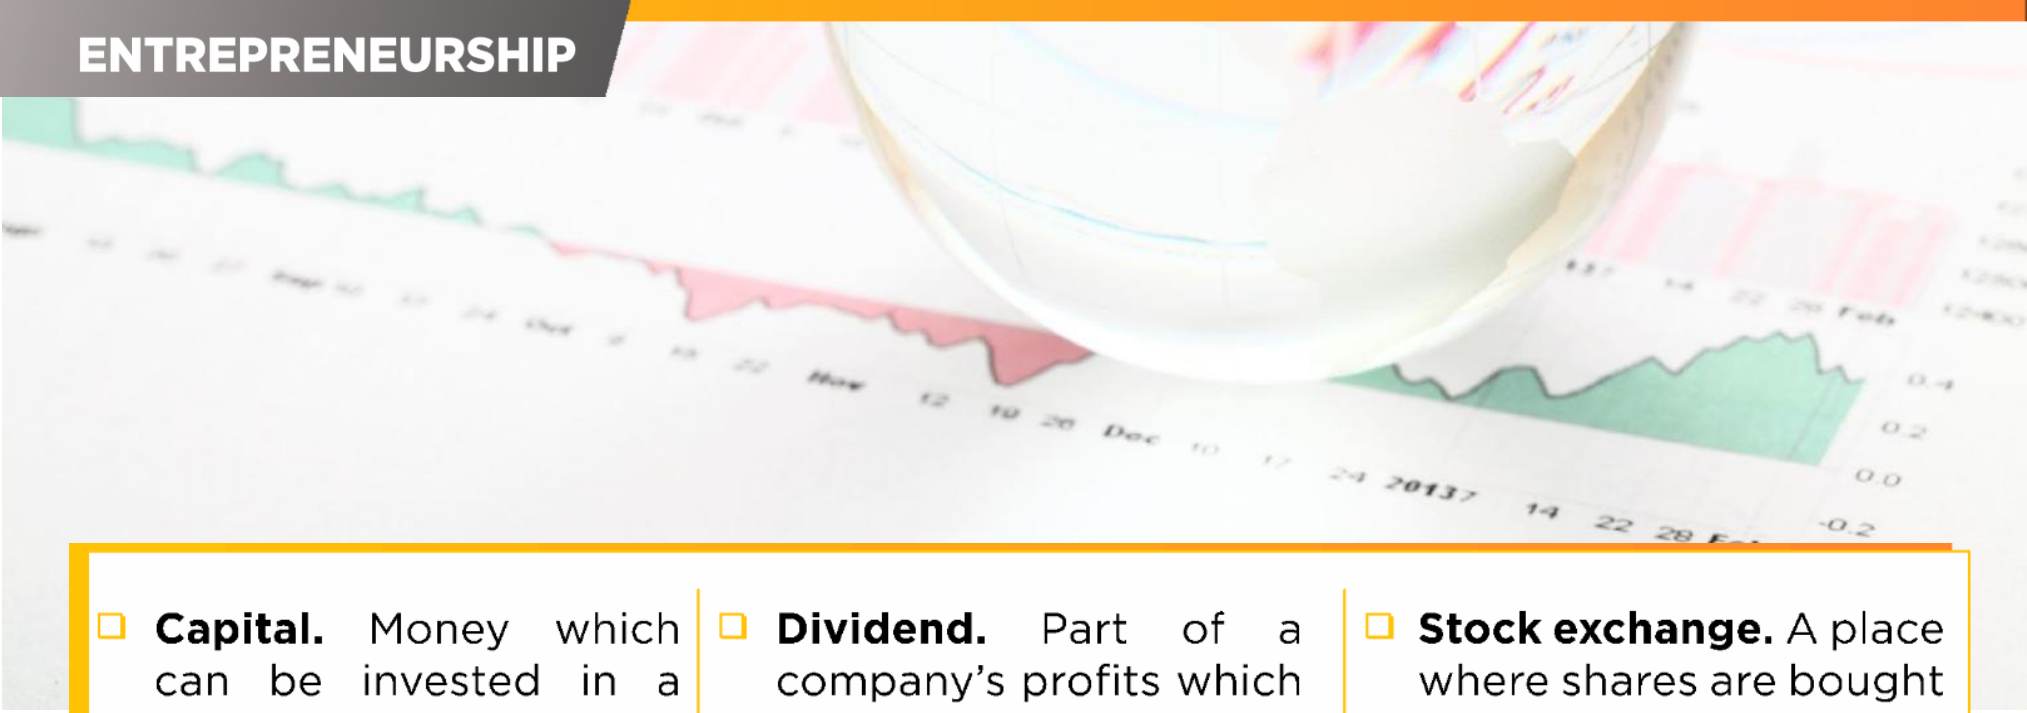

Nevertheless, it is important to think carefully about this topic. For example, you need **to clarify the following questions:**

- Which are the most usual ways for raising money?
- Which are the easiest to obtain?
- Which give the entrepreneur more/less control of the business?
- Which are the safest for the entrepreneur?
- Which are the cheapest?

To be able to answer the questions discussed above you will need **to learn the following vocabulary:**

- **Broker.** A person who can buy and sell shares in a company for you.
- **Shares.** The parts in which a company is divided so investors can buy them.
- **Shareholder.** Someone who owns part of a company.
- **Stock.** A certain number of shares.

- **Capital.** Money which can be invested in a business to make profits.
- **Dividend.** Part of a company's profits which is paid to the people who have bought shares in it.
- **Stock exchange.** A place where shares are bought and sold.

There are many tools and methodologies to organize the business plan of a start-up. Nevertheless, one of the most famous is **Canvas**. This is a framework that integrates nine **components** in the plan. Those are the following:

- Key partners
- Key activities
- Key resources

- Value proposition
- Customer relationship
- Channels
- Customer segment
- Cost structure
- Revenue streams

To write a business plan using Canvas, or another methodology, is a first step to organize and clarify your ideas. This is the minimum requirement that an investor may ask.

VIDEO 3

Please review the following video:

Entrepreneurship and innovation

INNOVATION

To survive in today's world, it is important that we regularly review what we are doing and how we are doing it. By considering new ideas and new ways of doing things, and trying to innovate, we can improve on our products/services, increase sales, reduce costs, and make our processes more effective and efficient. **Innovation is key to increasing profits.**

- **Using the latest technology to improve your product/service.** When we think of innovation, we often think of new technologies. While they might be impressive, we should not use new technologies just because they are available. It is important to consider how the technology can improve our product/service and make a difference to our customer. Companies that produce cars, toiletries, household appliances, etc. often have a large R&D department to work on making their products better.

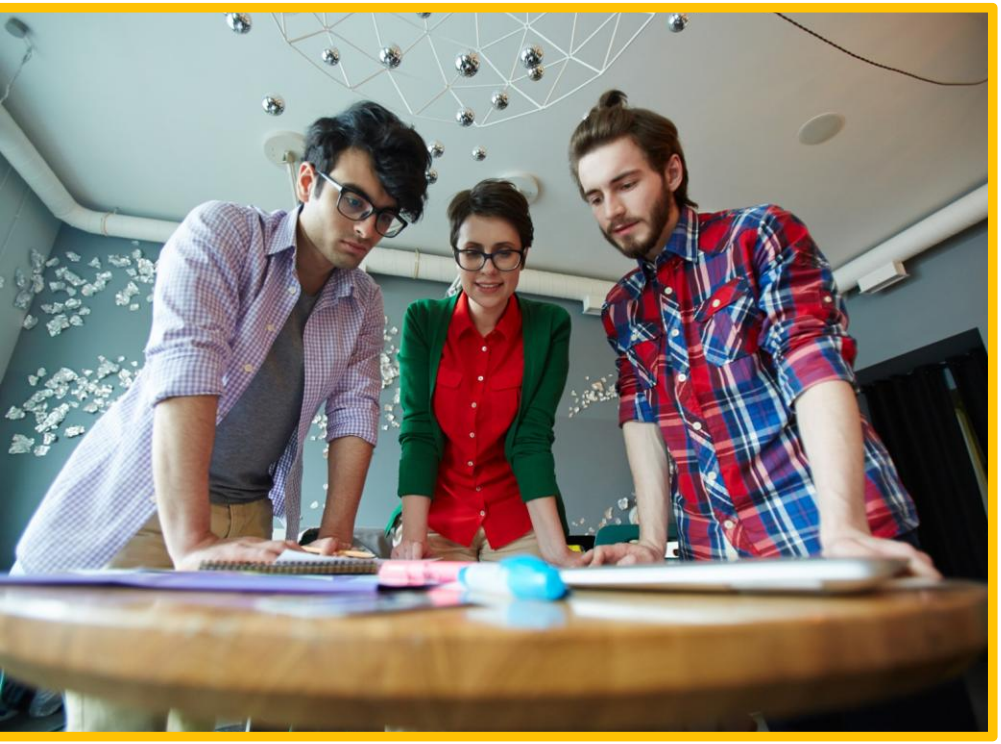

Responding to customer demands by changing what is on offer. By listening to customer feedback, we can get their opinions on how we are doing and find out about what it is that they want. We also need to be aware of changes in customer demands and keep up with the times. When fast-food restaurant McDonald's realised that the market wanted healthier choices, they introduced fruit and salads, while removing the 'super-size' option from their menus.

- **Offering a new product/service to reach new customers.** Your business might be doing well, but there is no growth or development and there is a risk that your competitors might take away some of your customers. Innovation sometimes means developing a new product that targets a different market. Although video games were often played by boys, in 2006, video games giant Nintendo introduced the game console Nintendo Wii, successfully targeting girls and elderly people.

- **Changing the way you provide a service.** By looking at the changes to the customer's lifestyle and needs, we sometimes realize that there might be better ways to serve them. Customers who do not have a lot of time might prefer to have their food or their shopping delivered to their homes, or they might like to do their banking online rather than in an actual bank.

Not all innovation will bring success to our business, but it can give us the opportunity to grow and learn more about what we do and what our customers might want.

One of the most important methodologies for innovation is **Design Thinking.** The following are the main steps:

- **Empathize.** The main point is to define what is the problem? What is different from other methodologies is that this one focuses on the human context.
- **Define.** Here, the question is why is it important? The methodology differs because creates a point of view.
- **Ideate.** In this stage, the main question is: How do we solve it? In this phase, the most important thing is to not stop at the obvious.

- **Prototype.** The ideas must be tested. Therefore, the question is how do we create them? The main point is to star low-cost and fast.

- **Test.** Finally, it is important to answer: Does it work? After this stage, it is possible to refine the product in a new cycle.

ACTIVITY 2

We invite you to do the following activity:

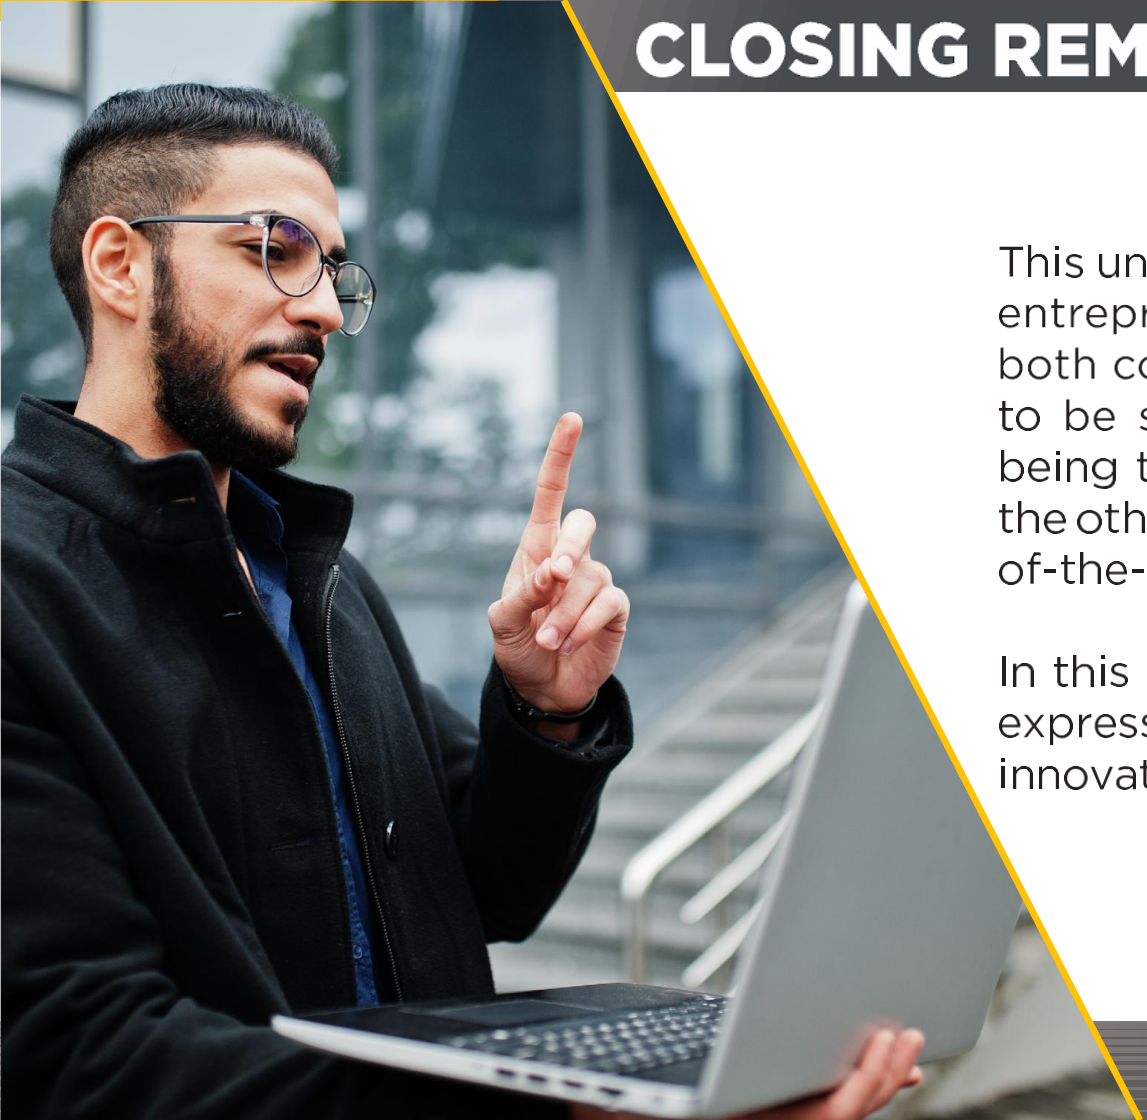

Press the button to download the activity:

Press the button to submit the activity:

CLOSING REMARKS

This unit provides all you need to know about entrepreneurship and innovation. Definitely, both concepts are truly relevant when trying to be successful. Entrepreneurship is about being the owner of your own enterprise. On the other side, innovation is about using state-of-the-art options to grow your business.

In this unit you learnt to use vocabulary and expressions in order to convey ideas about innovation and entrepreneurship.

CONGRATULATIONS!

You have just finished the third unit of your course *Business English II*. We invite you to conclude this effort by taking the exam of the unit. To do that, you must go back to the main screen and click on "*Presentar examen*".

UNIT 4
GRAMMAR AND PUNCTUATION

SYLLABUS UNIT 4

4.1 Grammar

4.2 Punctuation

INTRODUCTION

The goal of this fourth unit is to illustrate the basic rules that you must follow to construct your sentences. The purpose is to make you feel secure about your communication and the messages that you are conveying. Besides, the punctuation will help you to be clear, concise and professional.

PROFESSIONAL COMPETENCIES

- The student will be able to identify common mistakes associated with grammar.
- The student will be able to properly apply the most common punctuation marks.

GRAMMAR

There are many rules that you need to study, learn and dominate when you talk in English. Nevertheless, the following ones are **the most important ones for business situations** such as:

- Express action(s) in the past.
- Express action(s) in the present.
- Express action(s) in the future.
- Express wishes.
- Express regrets.

To express **actions in the past** you may use the following structures:

> **I used to** work as a business analyst **but** now I work as a tester.

> **I used to** work as a business analyst **before** I started working as a tester.

To ask you may say:

> **Did** you **use** to work as a business analyst?

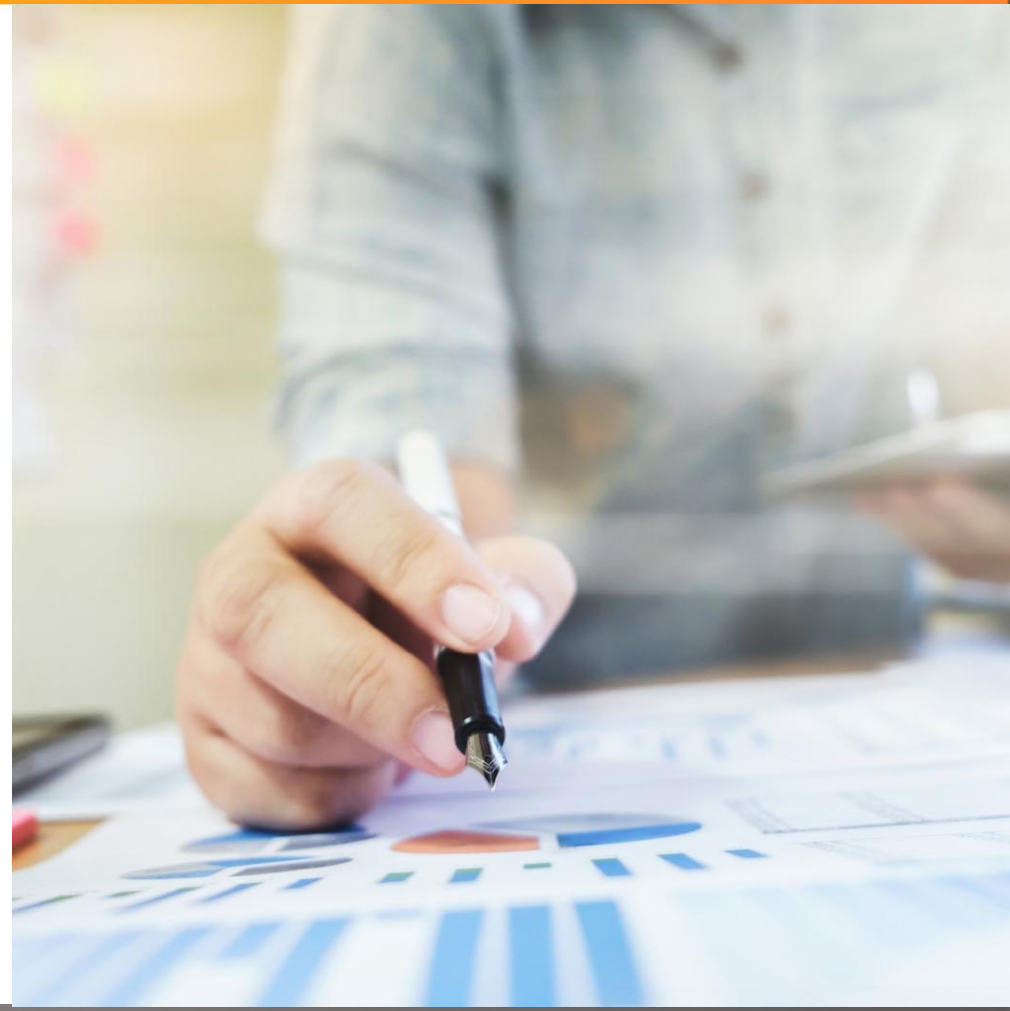

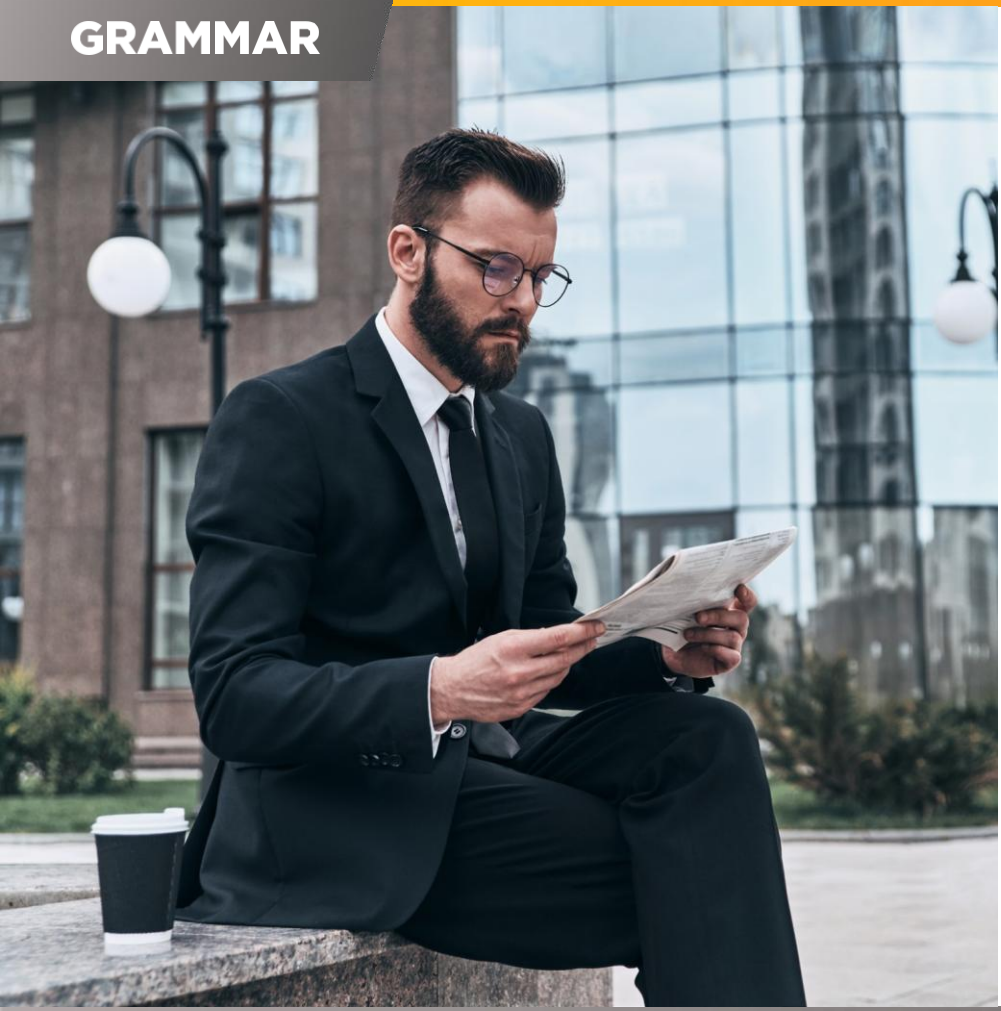

In that scenario, someone may **answer**:

> **I used to** work as a business analyst.

> No. **I didn´t use to** work as a business analyst.

Remember, you will use "*used to*" when you want to talk about habits in the past.

To express **actions in the present** you may use the following structure:

> I am **reading** the manual.
> As I frequently do.

When you add "*ing*" to the base form, you are indicating that "at that precise moment" the subject is executing the action.

It is important to notice that there are **action verbs** and **state verbs.** The following are just some illustrations:

- **Action verbs** may use a simple form and a continuous form. For example: read, eat, lie.

- **State verbs** are not usually used in the continuous form. For example: love, want, have, know.

To express **actions in the future** you may use the following structure:

> I am **going to** finish the project by next week.

You should use the structure "*going to*" when talk about future events that have been planned in advance.

You may also use "*going to*" for **prediction**. For example, you may following the structure:

> Considering the information, the customer is **going to** ask for a change.

Therefore, use this structure anytime that you have some evidence and you want **to predict some result or behaviour.**

To ask you just need to change the order of the “subject” and the verb “to be”. For example:

> **Am I going to** finish the project by next week?

> Considering the information, **is the customer going to** ask for a change?

The answers may be “yes, you are” for the first one; and “yes, he is” for the second one.

To express wishes, there is a specific structure you must follow:

> **I wish I could** be the leader of the project by next sprint.

> She **wishes** her boss **would** give her less work.

"*Wish*" with "*could*" is usually used when someone is **expressing a desire** to do something themselves.

"*Wish*" with "*would*" is used when someone is **expressing a desire for someone else to do something.**

To **express regrets**, the word "*wish*" is also used. Still, the structure is different:

> **I wish I earned** more money

> I've failed the test. **I wish I had** thought better.

"*Wish*" is used with the past simple to express **regrets and desires about the present**.

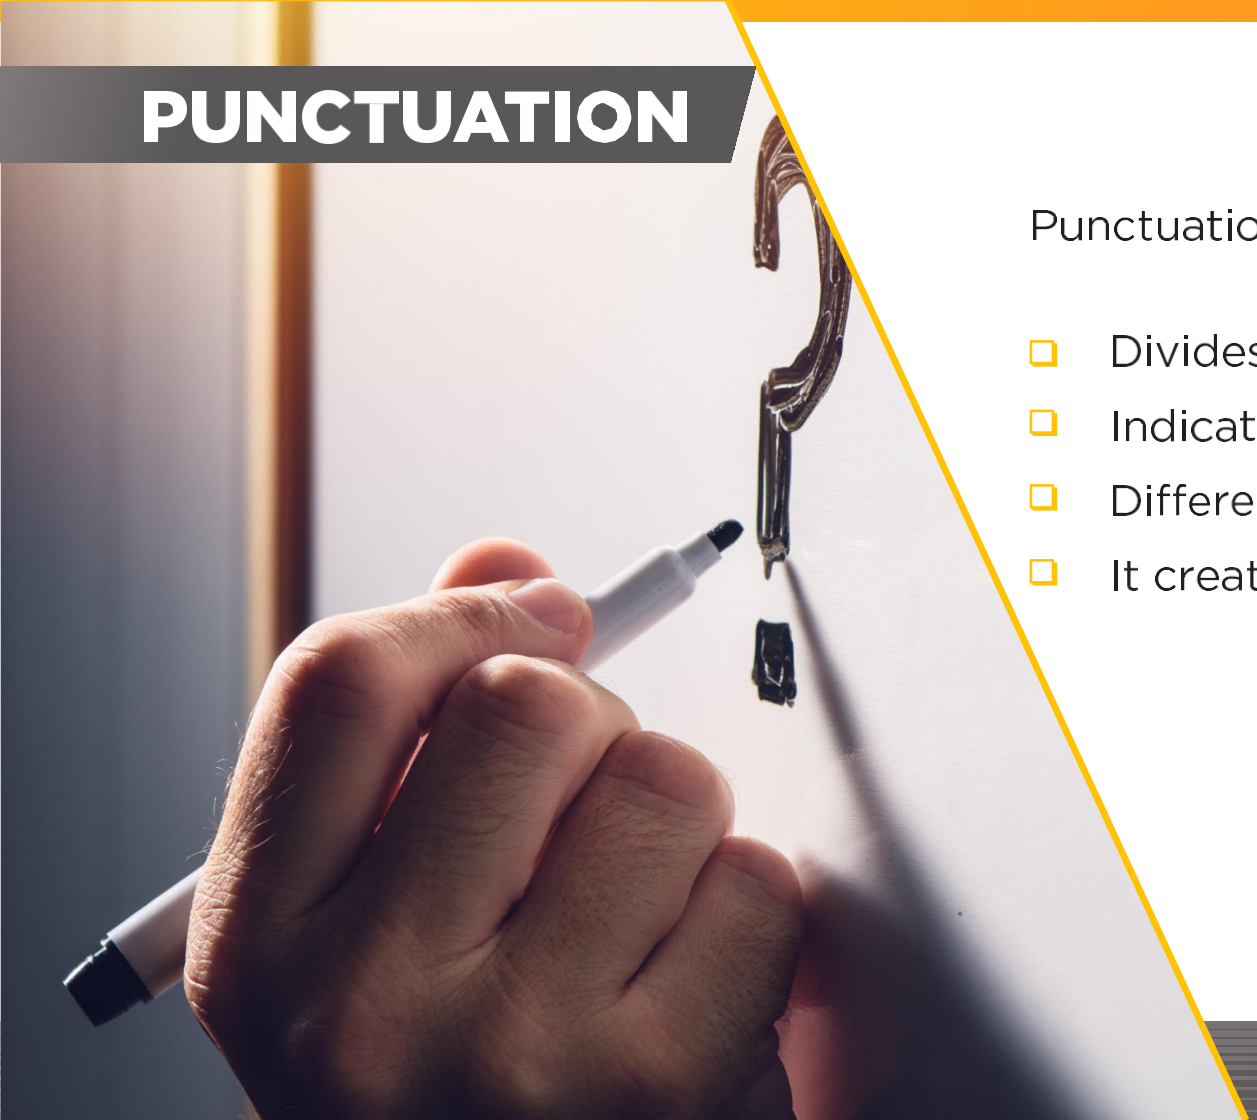

"*Wish*" is used with the past perfect **to talk about the past**.

Please review the following video:

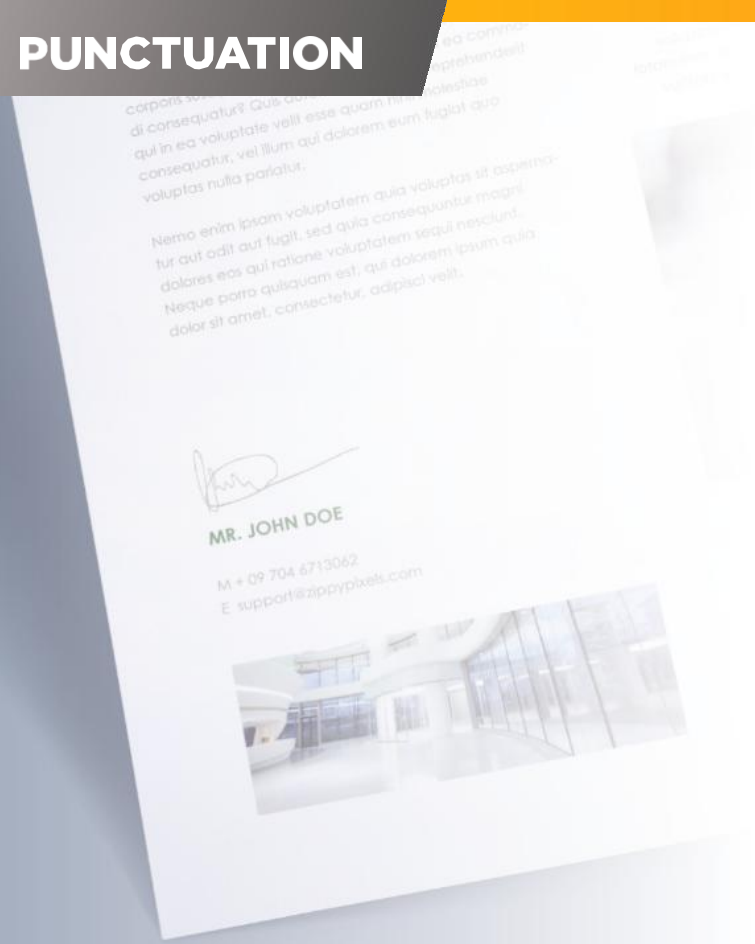

Grammar and punctuation

PUNCTUATION

Punctuation serves the following purposes:

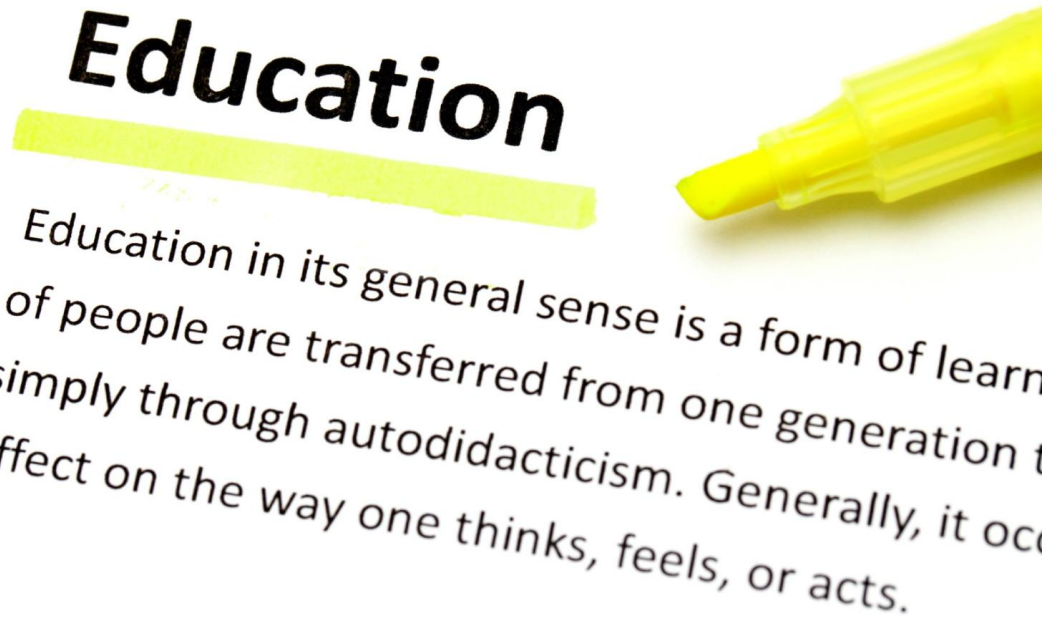

- Divides passages up.
- Indicates a relationship.
- Differentiates between two meanings.
- It creates emphasis.

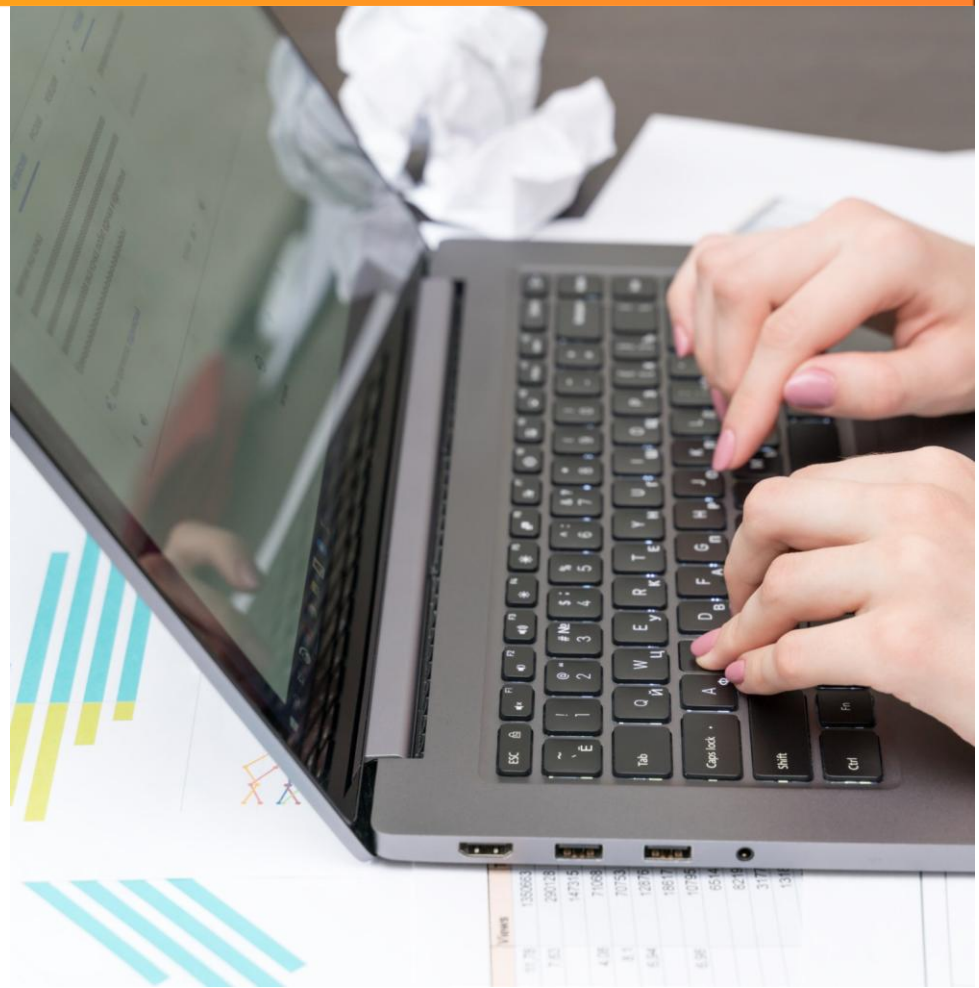

To fulfil those purpose there are some **specific elements:**

- Full stops (.)
- Commas (,)
- Semicolons (;)
- Colons (:)
- Brackets [()]

- Dashes (-)
- Apostrophes (‘)
- Quotation marks (“)
- Exclamation marks (!)
- Question marks (?)
- Hyphens (-)

- **Full stops.** There are just two occasions where they are used:
  - To end a sentence.
  - After initials or abbreviations.

- **Commas.** You may use a comma in the following scenarios:
  - When you are listing items. It is not usual to have a comma before the final ‘and’ or ‘or’.
  - You can use commas as parentheses, when you insert something which either expands on the main part of the sentence without affecting it, or qualifies part of it. In both these cases, the main part of the sentence stands perfectly well on its own, without the section in parenthesis. For example: “This is not, I am sure, what the Board had in mind.”

PUNCTUATION

- **Semicolons.** These are used to indicate a longer pause than a comma would give, but shorter than a full stop. Some applications are the following:
  - Emphasising a statement: A semicolon can be used to emphasis a statement or make it more punchy.
  - Conveying contrast: Semicolons can be used to balance contrasting statements.

PUNCTUATION

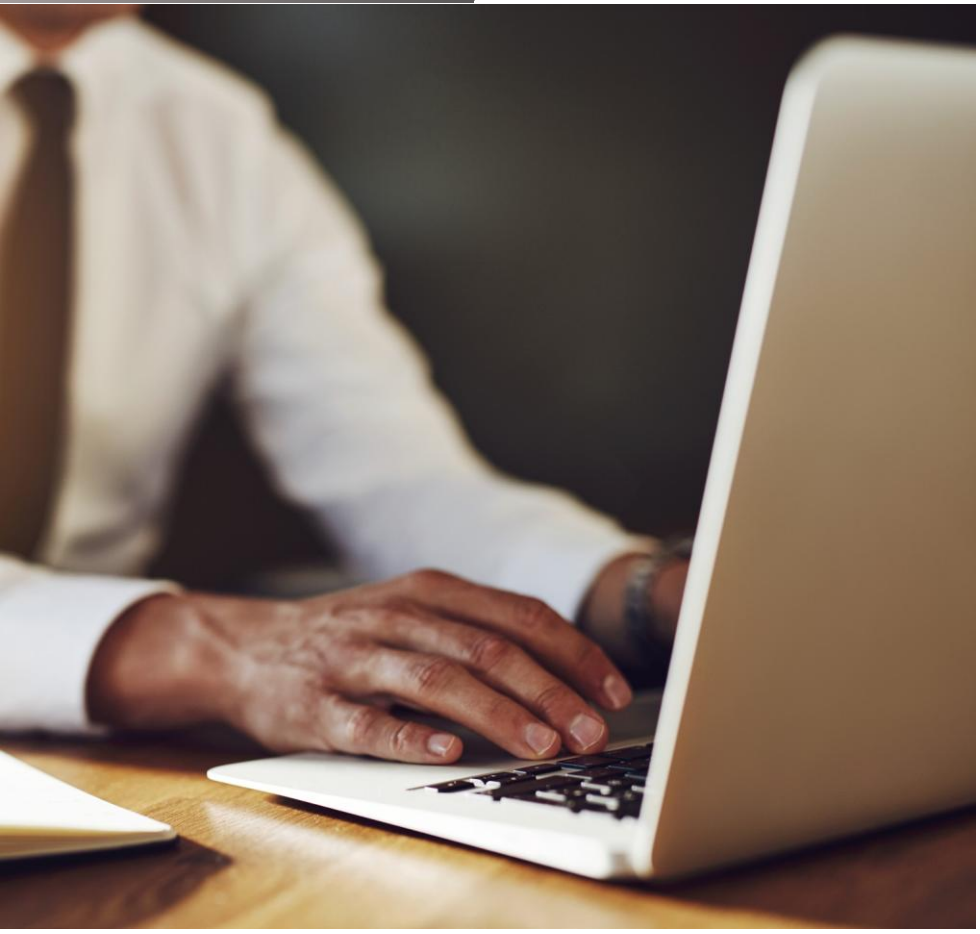

- **Colon.** You may use colons in the following scenarios:
  - They are used to introduce list, especially when the items are separated by semicolons.
  - They can be used to indicate two sides of the same theme; the first part of the sentence makes a statement, and the second part explains it.
  - To introduce direct speech or quotations.

- **Brackets.** There are two kinds of brackets:
  - Round brackets (also called parenthesis): The part in brackets is an extension of the sentence, but it does not express part of its theme or idea.
  - Square brackets: They are used when you are quoting directly from another source and you want to add something of your own.

PUNCTUATION

- **Dashes.** Dashes increase the emphasis of what you are saying. The part of the sentence after the dash – or between the dashes in the case of two – stands out more, and therefore makes it starker.

- **Apostrophes.** It is used to show that a letter have been left out of a word (i.e., contractions). Its most common use in a business contexts is to denote the possessive form of a noun (i.e., the clients' file).

PUNCTUATION

- **Quotation marks.** They are used when quoting the exact words of a person, document or publication. They are also used to indicate irony. Whether you use a single or double quotations marks is a matter of personal preference.

- **Exclamation marks.** They are seldom necessary or advisable in business correspondence, as you should not be exclaiming, but reasoning and persuading.

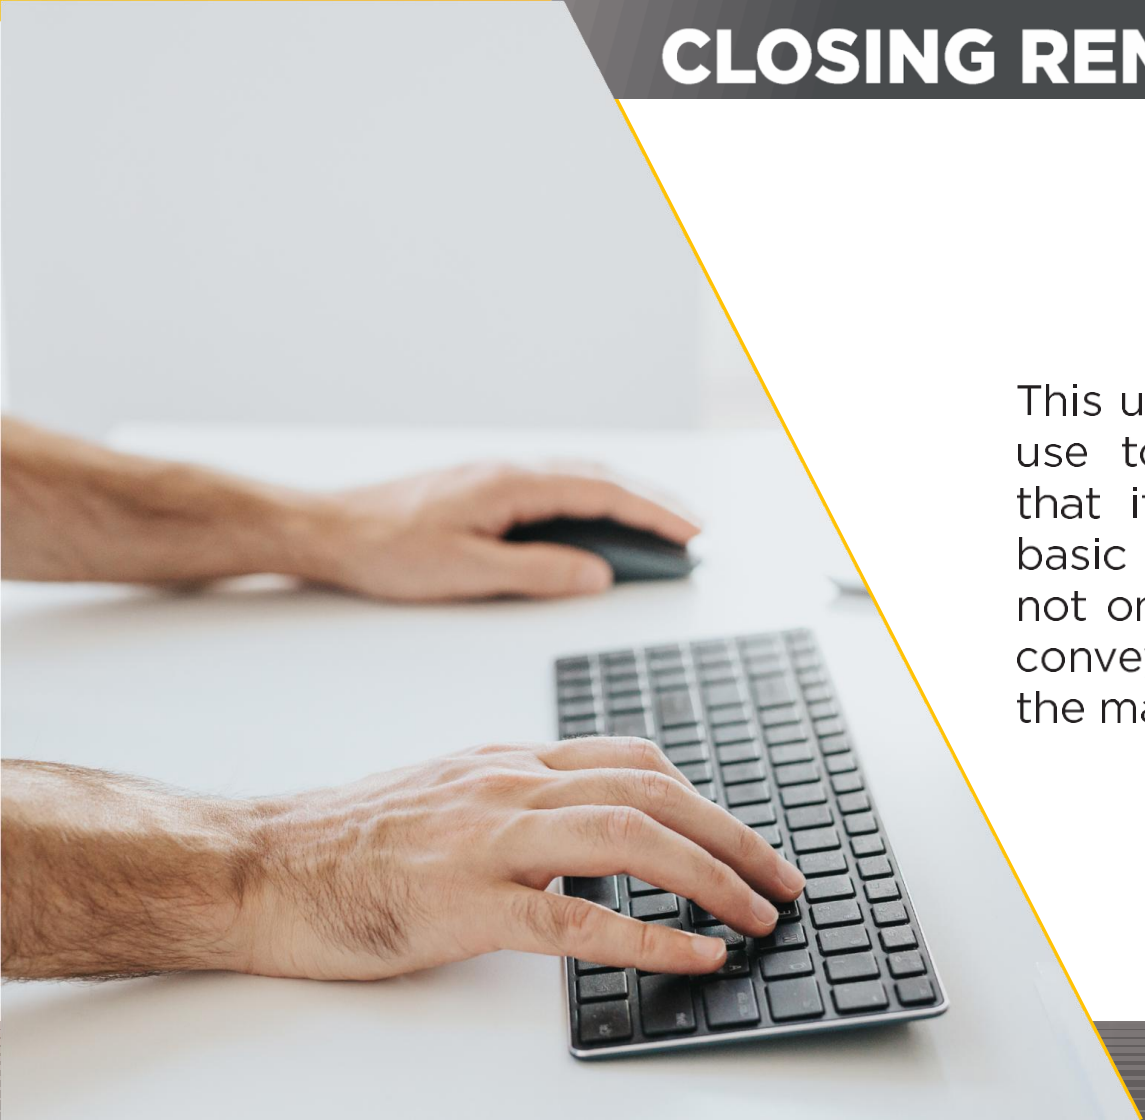

PUNCTUATION

- **Question marks.** They end sentences that are questions.

- **Hyphens.** It connects two or more words to form a compound word (i.e., car-park). Another use is to differentiate between words beginning with ‘re-’. For example, ‘reform’ means ‘improve’, whereas ‘re-form’ means ‘form again’. Finally, it makes a compound number (i.e, twenty-eight).

CLOSING REMARKS

This unit provides vocabulary that you may use to improve your writing. Remember that it is really important to identify the basic grammar and punctuation marks. It is not only to look professional but it help to convey your ideas clearly. At the end, this is the main point of communicate something.

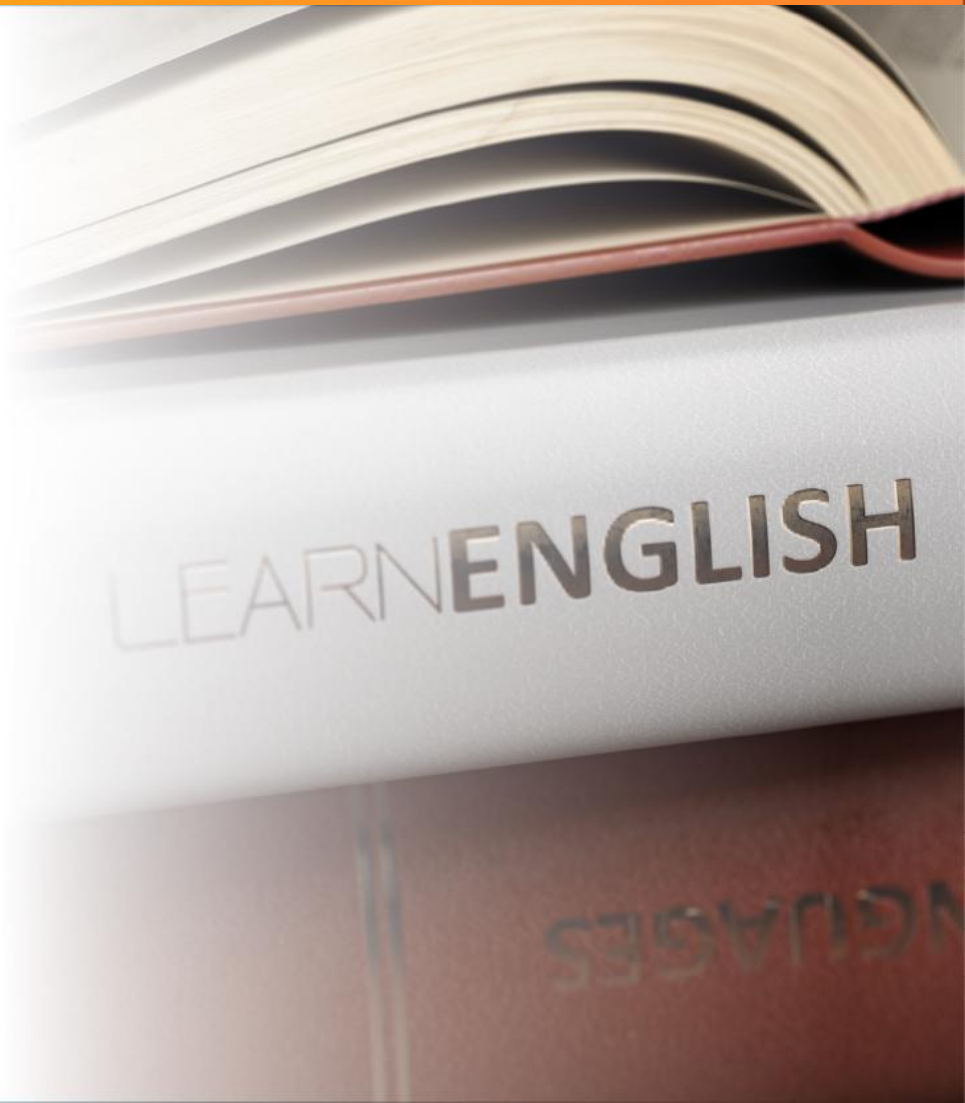

CONGRATULATIONS!

You have just finished the fourth unit of your course *Business English II*. We invite you to conclude this effort by taking the exam of the unit. To do that, you must go back to the main screen and click on "*Presentar examen*".
